

# 2022 IFEA WEBINAR SERIES

## IFEA Webinar on Demand

### **Cyber Security: Protecting Your Event and Attendees Against Cyber Risk**

**Joshua Stemp**

**Cybersecurity State Coordinator, Region X  
Cybersecurity and Infrastructure Security Agency  
Boise, ID**

From phishing to ransomware; QR code scams to computer malware; email, database and personal information hacks and many more; we can easily get overloaded with warnings and red flags of all the things we need to be concerned about. While technology can make our lives and events better on many fronts, it is also a continually evolving risk factor that we must stay aware of, ahead of and protected from. Joshua Stemp, Cybersecurity State Coordinator, Region X, for CISA (Cybersecurity and Infrastructure Security Agency), will help us all to understand which risks are the ones that we are most vulnerable to, and what proactive and affordable steps/resources we can take/use to protect ourselves, our events, and our attendees.

Josh Stemp is the Cybersecurity State Coordinator and Federal Cybersecurity Advisor in Idaho, representing the U.S. Department of Homeland Security's Cybersecurity and Infrastructure Security Agency (CISA). CISA serves as the nation's risk advisor and collaborates with industry and government partners to strengthen the resilience of the nation's critical infrastructure against cyber and physical risks. In this role, Mr. Stemp is a cybersecurity liaison between state and local government officials, critical infrastructure stakeholders, and the federal government and provides strategic planning, threat awareness, risk management advice, and incident response coordination.

**Length:** 60 Minutes

Webinar on Demand will be sent as an online link along with any supporting document provided.
